Good morning and thanks for the update. We'll talk more next week.

Thanks also for making your room reservation for Amarillo.

Subject: Lowerline

I made a site walk on Wednesday. Met with state and city people. I really appreciated their attitude about site plans.

The biggest thing that I came away with was the radiation that could be measured at the surface. The micro-R was pegging out when held about 15 inches above the ground. We could find a few of the spots that were previously tagged with spray paint. We could easily reproduce their findings.

And while it's in the middle of the street; with no side walks, people were walking in the middle of the street quite a bit while we were there.

I'm doing more pushing to get the funding approved.
